

TEAM PLUS WHEEL TURTLE QUICK START

Download Team Plus TELEDASH Phone App

- Your Team Plus WHEEL TURTLES can be monitored and configured on the TELEDASH app.
- Download the app from Apple App Store at:
<https://apps.apple.com/us/app/teledash/id1562494439>
- Or Android Version from Google Play.
<https://play.google.com/store/apps/details?id=cloud.teamplus.teledash>

Configure WHEEL TURTLES into TELEDASH app

- Ensure each WHEEL TURTLE is powered on using either internal Battery (model 1 only) or USB connection.
- Using TELEDASH app, go to Settings, and Search for each WHEEL TURTLE to set the ID's in the app.
- In the Settings page, set the threshold temperatures for Green, Yellow, and Red appropriate to your situation.

Install WHEEL TURTLES

- Find a location for each WHEEL TURTLE in each wheel arch so that the sensor heads can see the entire width of the tyre.
- Each WHEEL TURTLE should be oriented such that the location label writing has the bottom of the writing towards the outer edge of the wheel.
- Sensor can be angled across the face of tyre to get more width coverage
- Hint: Use the Thermal View in TELEDASH to help establish location, distance and angle.

Monitor your Tyre Temperatures

- In the TELEDASH app, click the power icon switch at top left to start monitoring the tyres live.
- Display will show 8 temperature bands for each tyre, colour coded based on your Settings. Distance to tyre and tyre colour is also represented.
- Click on a specific tyre in the app to view the thermal image from that WHEEL TURTLE.
- If you are using a TELELOGGER with connection to TELEHUB, then your data will also be available live on the TELEHUB app pages when out of Bluetooth range.
